OBJECTIVES

1. Identify at least one way that enteric disease outbreak investigations can lead to improvements in food safety.
2. Discuss at least one way that different levels of governmental agencies collaborate in outbreak investigations.
3. Describe at least one way in which new technologies can support the detection of enteric disease clusters.
4. List at least one example of how interdisciplinary public health professionals collaborate in outbreak investigations as a team.
5. Provide at least one example of how public health professionals are advancing health equity on enteric disease across all government agencies.

ACCREDITATION STATEMENTS:

In support of improving patient care, this activity has been planned and implemented by Centers for Disease Control and Prevention and **Association of Food and Drug Officials (AFDO), Association of Public Health Laboratories (APHL), Association of State and Territorial Health Officials (ASTHO), Council for State and Territorial Epidemiologists (CSTE), Food and Drug Administration (FDA), National Association of County and City Health Officials (NACCHO), National Environmental Health Association (NEHA), and the United States Department of Agriculture Food Safety and Inspection Service (USDA-FSIS)**.
